

TONY EMAD | ART DIRECTOR | BRAND DESIGNER

Kibex Brand Identity

Brand Overview

- Problem**
Most e-commerce platforms in the market rely on slow, generic templates like WordPress or Bitrix - These systems are difficult to scale, vulnerable to security risks, and fail to reflect the quality of growing brands.
- Solution**
Kibex rebuilds digital products from the ground up — creating fully custom, secure, and high-performance platforms.

By combining development and cybersecurity in one process, Kibex delivers systems that are fast, scalable, and protected from day one — allowing brands to grow without technical limitations.

Mission

To build secure, high-performance digital platforms that reflect the true value of modern brands — combining technology, design, and security into one seamless system.

Vision

To redefine how digital products are built — moving away from templates toward fully custom, secure systems that set new standards in performance, scalability, and quality.

The Brand Logomark

The icon is constructed, not drawn — reflecting Kibex's approach to building fully custom systems from scratch, not relying on templates.

Star shape represents **The core point** | control and validation symbolizing authentication, security checks, and the protected heart of every system.

Independent geometric elements represent different system components - frontend, backend, and security layers all built separately but designed to work together.

Logo Concept

Our logo reflects Kibex's core approach — building secure, structured systems.

- **Constructed K Symbol** | The icon is built from modular elements connected through a **Central node**, representing scalable systems with security at the core.
- **The Unified Form** reflects the integration of development and cybersecurity, while the precise shapes express performance, control, and reliability.

Logo Variations

ICONMARK

The standalone K icon | Used for app icons, favicons, and minimal brand applications where the symbol alone ensures recognition.

SYMBOL

Primary Logo

The primary logo lockup combining the icon with the Kibex wordmark. Used for main branding, website headers, and official communications.

HORIZONTAL

The main identity in Cyrillic

Used for all primary brand communications, ensuring clarity and strong local presence.

CYRILLIC

English / Media Version

Used for international contexts, digital platforms, and media where a global presence is required.

COLOR PALETTE

The palette is built to reflect Kibex's core positioning as a security-first, premium tech company.

Dark tones establish a strong, stable foundation that communicates trust and control, while **Spectrum Indigo** reinforce technology, precision, and system reliability. **Bronze Gold** is used as a subtle accent to introduce a sense of exclusivity and high-value craftsmanship, aligning with Kibex's luxury clientele. Together, the colors create a balanced identity that feels both technically authoritative and visually premium.
